Participant Handbook (AIT x Tencent Hackathon)

The Singapore 2026 Challenge invites developers, indie makers, product managers, enterprise tech teams, early-stage startup teams, outstanding students, and others to build end-to-end AI agents with CodeBuddy and WorkBuddy. Participants are encouraged to solve real-world business challenges and transform industry know-how into practical AI capabilities.

NOTE: The products you'll use to participate in the hackathon are desktop apps. Download them (links below) and register for an account.

Product	Positioning
CodeBuddy (https://www.codebuddy.ai/).	AI coding assistant that rapidly generates code and applications through conversational interaction.
WorkBuddy (https://www.workbuddy.ai/).	An AI-native office agent designed to intelligently manage documents, spreadsheets, PPTs, and schedules across all scenarios.

I. Challenge

Agent Development Challenge: Build an end-to-end AI Agent powered by CodeBuddy **OR** WorkBuddy.

Challenge Topics

Topics	Description
Productivity Agent	Use AI to reshape office work, document handling, knowledge management and team collaboration — Boosting individual and team productivity with AI.
Business Agent	Use AI to help enterprises, SMEs, indie developers and solopreneurs run day-to-day operations, marketing and customer service —Empowering businesses with AI.
Life Agent	Build AI tools across daily routines to enhance well-being and unlock personal potential —Optimizing lifestyle and wellness with AI.

Examples

Track	Sample Demo Ideas
Productivity	- MeetingMind — automatically integrates with meeting apps, then generates multilingual minutes, action items and follow-up emails after each meeting. - InboxZero Agent — automatically classifies emails, drafts replies, and files away contracts and invoices for you. - DocSync — pulls scattered project info from Notion, Google Docs and Slack into a single structured weekly project report.
Business	- F&B Manager Agent — handles restaurant menu updates, low-stock alerts, food-delivery platform sync, and customer review replies. - Local Marketing Agent — generates multilingual marketing content and pushes it across multiple platforms.
Life	FinWhisperer — transforms complex financial knowledge and real-time market news into personalized, easy-to-learn investing lessons.

II. Challenge Timeline

Date	Phases
20 Jul – 14 Aug	Registration & AI Agent Project Submission
14 Aug 6pm	Submission Cutoff & Online Judging to select and announce the Top 8 teams
Late Aug	Singapore in-person Demo Day to compete for Top 3 projects. ~100 capacity.
September	Regional Top 3 teams proceed to the Global Grand Final to compete for the champion.

III. How to Participate

3.1 Eligibility

- Open to individuals and teams (maximum of 3 members per team).
- Project must be built either CodeBuddy or WorkBuddy.

3.2 Step-by-Step Guide

Step 1 Register

- Form your team (or go solo)
- Pick your product (WorkBuddy for non-technical, CodeBuddy for technical folks)
- Register on BOTH the Luma Page (<https://luma.com/jo916m7a>) AND the AI Tinkerers Portal (<https://singapore.aitinkerers.org/p/ai-tinkerers-x-tencent-cloud-hackathon-agent-development-challenge>),.
 - Luma helps us keep track of distribution. You can submit individual registrations here. We'll add you to the telegram group shortly after.
 - AI Tinkerers Portal is the formal registration platform. Questions focused on how you'll participate. Matchmaking can be done on the platform too.
- Fill up all registration questions.

Step 2 Build Your Agent

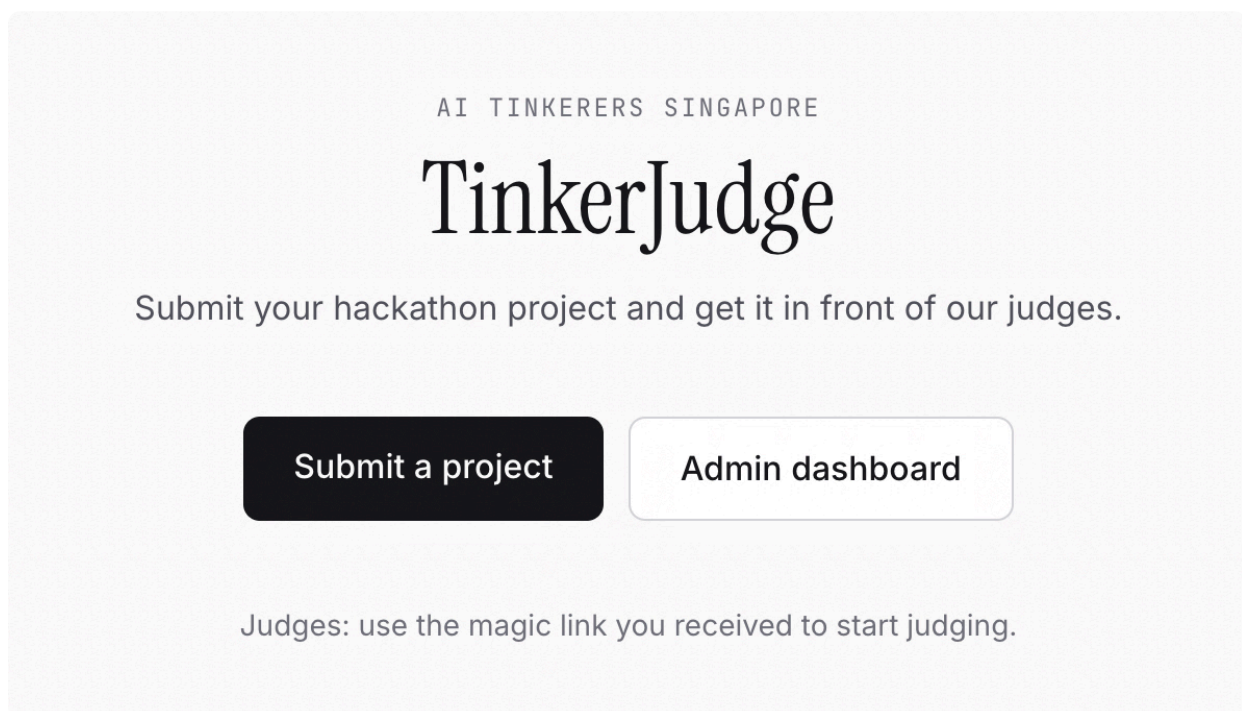

- Pick a Direction: Choose one of the three product agent directions (Productivity, Business, Life)
- Go build!
- Credit redemption details [here](https://hackmd.io/nimCWa4fSkegAuAutR6BPw?both#Credit-Redemption) (<https://hackmd.io/nimCWa4fSkegAuAutR6BPw?both#Credit-Redemption>)/below

Step 3 Submit

- On the upcoming TinkerJudge page (released closer to submission deadline), click "Submit Project".
- Fill in project details: name, direction, product used, and your project description.
- Further details are mentioned under "Submission Checklist"

Submission deadline: 14 August 6pm.

Credit Redemption

1. On WorkBuddy/CodeBuddy, sign up with your hackathon email address
2. Credit Redemption codes are provided at 12pm & 6pm everyday. (Tencent Compliance Team needs to check before distribution)

- Join our Telegram group (<https://t.me/+jJMfQXGW5VoyOGVI>), in the meantime to discuss ideas & form teams with other participants
- We'll also share ideas and tutorials on how to use WorkBuddy & CodeBuddy ★

3. Obtain your redemption code at the "Resource Distribution"

([https://script.google.com/macros/s/AKfycbxMC3NEudbL5u-](https://script.google.com/macros/s/AKfycbxMC3NEudbL5u-Hn5o_eh_OSId48c8M1VQHYPeyNgr0uefx3fh_YaWG4Li04_XE5Km/exec)

[Hn5o_eh_OSId48c8M1VQHYPeyNgr0uefx3fh_YaWG4Li04_XE5Km/exec](https://script.google.com/macros/s/AKfycbxMC3NEudbL5u-Hn5o_eh_OSId48c8M1VQHYPeyNgr0uefx3fh_YaWG4Li04_XE5Km/exec)), by entering your email address

4. Redeem your credits here for the hackathon

(<https://www.workbuddy.ai/events/redeem>) with your redemption code - product-agnostic as both products share one redemption.

⚠ Please Note: ⚠

- The same email address **must** be used across all 3 registration surfaces:
 - Luma (<https://luma.com/jo916m7a>) & AIT Portal (<https://singapore.aitinkerers.org/p/ai-tinkerers-x-tencent-cloud-hackathon-agent-development-challenge>). Registration
 - CodeBuddy/WorkBuddy Desktop App sign-up
 - Credit Redemption
- Credit redemption codes are distributed in a daily batch at 12:00 PM & 6:00 PM. If your email does not show a matching code, please reach out to us on the Telegram group to report the issue.
- WorkBuddy & CodeBuddy share one account & credits. Your 2000 credits can be used for both products.

3.3 Project Requirements

Basic Requirements

- The project must be original and built on at least one of the products CodeBuddy or WorkBuddy.
- A complete project description plus screenshots or a demo recording are required.

Submission Checklist

Submission Item	Description
Project title	The name of your AI Agent project.
Project Image	A 16:9 cover image of your AI Agent Project (for online showcase; top 8 are shown on Tencent page). Recommended size: 380x216px
Short blurb	A summary of what your project does or the value it delivers. Hard limit: under 10 words
Project Description	- Project Overview: Target Scenarios, Users, and Value Proposition - Real-World Scenario Insights: Source of Pain Points, Target Audience, and Core Problems Solved - Comprehensive Solution Design: business and technical architecture, and how prompts drive the AI generation. - Quantifiable Metrics or Defined Impact
Demo video	A 3 to 5 minute video covering: - Project Overview, - core Agent features and usage, - A short reflection on your build approach and any development-tool tips. Demo video can be shared as Youtube Video link or Google Drive link
Product Sharing	One-paragraph sharing of how you used CodeBuddy / WorkBuddy in your project and experiences working with it.
Project link (optional, bonus)	A live URL or demo link for your project.

Pitch Day Requirements

- Pitch deck (5-minute presentation + 5-minute Q&A).

- A live-runnable demo, with a screen recording as backup.
- Project brief: scenario description, technical architecture and business value.

IV. Judging Criteria

4.1 Judging Dimensions

Dimension	Weight	Explanation
AI innovation	30%	Scenario Insight & Depth of AI Utilization
Technical Excellence	20%	Engineering Implementation, Mastery of AI Tools, and Functional Completeness & Stability
User Experience & Demo	25%	How smooth the demo is, thoughtfulness of interaction design and general user-friendliness.
Business Value & Viability	25%	How well the project solves a real problem and its potential for commercial roll-out.

4.2 Judging Process

- Preliminary round: We'll review all projects; the Top 8 finalists are announced prior to demo day.
- Pitch round: 8-minute presentation + 5-minute Q&A, scored by the judging panel.
- Grand Final: the Top 3 from Singapore head to Shenzhen to compete for the global champion.

V. Reward System

5.1 Participant Benefits

Reward Tier	What You Can Win	Who Qualifies
Participant Reward	2,000 Credits on CodeBuddy/WorkBuddy Overseas Personal Edition guaranteed upon approved registration.	All participants who are successfully registered.
Regional Reward	Official certificate, a professionally packaged case study, and exposure on the Tencent Cloud official website.	Top 8 teams advance to the Singapore demo-day.
Regional Top 3	Direct entry to the Grand Final in Shenzhen. Includes a Tencent Headquarters Tour in Shenzhen — flights, hotel and meals all covered.	Regional Top 3 teams.
Grand Final Awards	Champion ¥50,000 cash, First runner-up ¥30,000 cash, Second runner-up ¥20,000 cash.	Top 3 of the Global Grand Final.

VI. Hackathon FAQs

Q1: I don't know how to code — can I still take part?

Yes! Both CodeBuddy and WorkBuddy let you generate code and applications through natural-language conversations, so no coding background is needed to enter.

Q2: Can I take part on my own?

Yes. You can enter as an individual or form a team (up to 3 members per team).

Q3: Can I submit multiple projects across the three directions?

Yes. You're welcome to enter more than one direction, and to submit more than one project per direction.

Q4: Can I edit my projects after submitting?

Yes. You can sign in to the website and update any submitted projects at any time before the submission deadline.

Q5: Is the pitch round held online or in person?

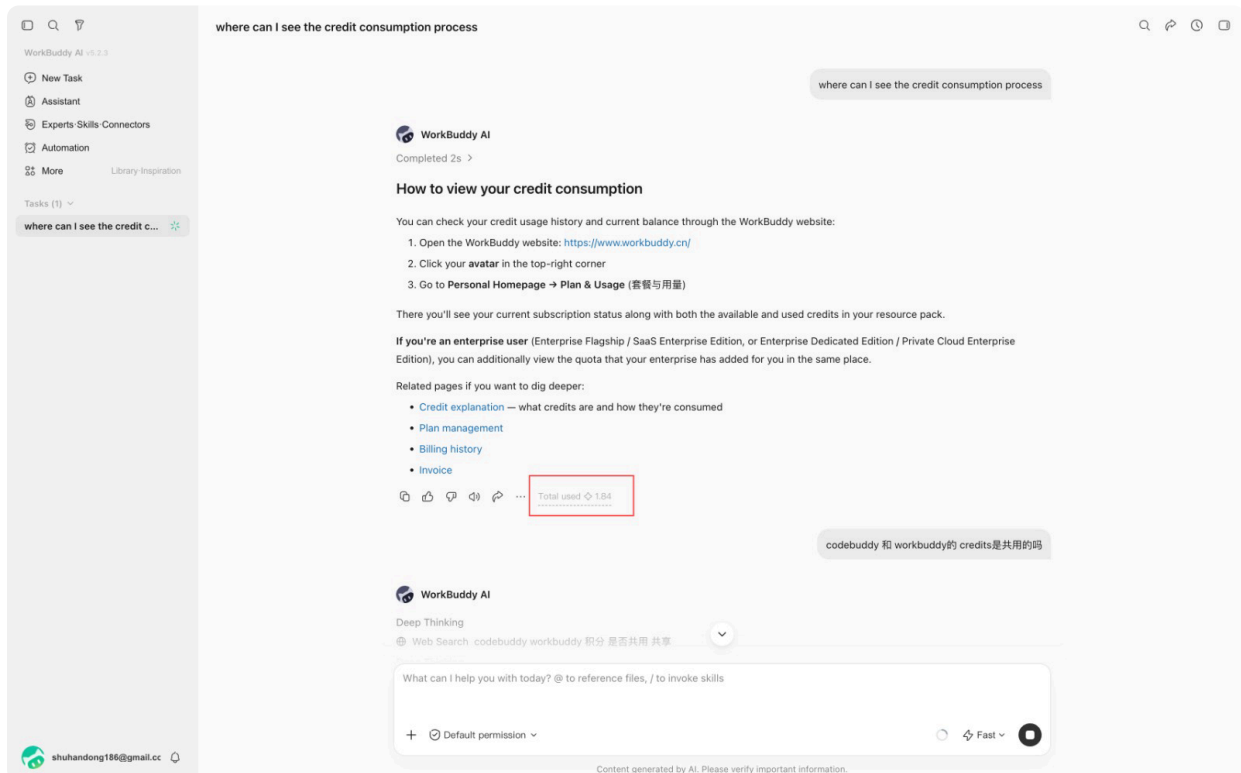

The format will be in-person, confirmed on the event website/via Luma blast. Once you are shortlisted in the Top 8, we will notify you in advance of the exact format, timing and logistics.

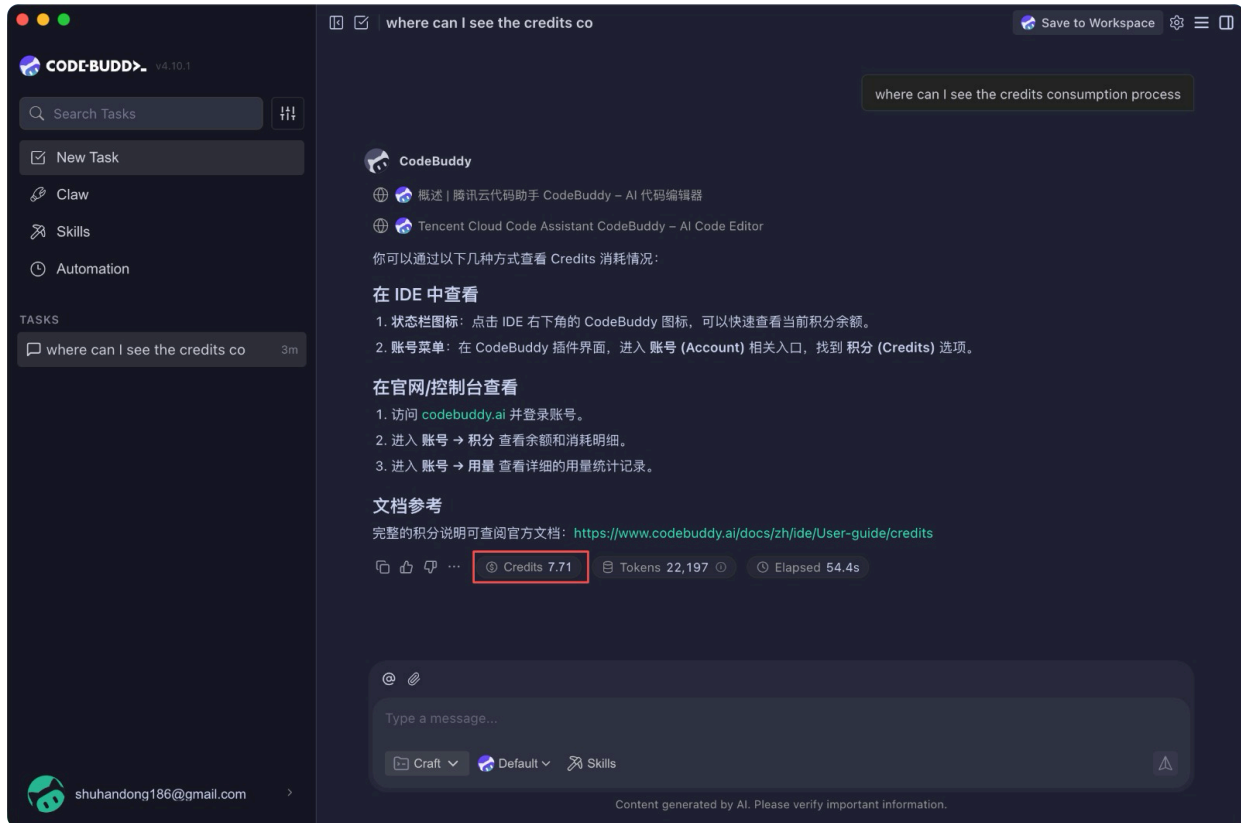

Q6: Must my projects use Tencent Cloud products?

Yes. Every project must be built on at least one of CodeBuddy or WorkBuddy, and must include proof of usage (demonstrated via the Product Sharing component) — otherwise it will not proceed to scoring.

Q7: How do I check my CodeBuddy/WorkBuddy usage thus far?

Check the CodeBuddy Usage (<https://www.codebuddy.ai/profile/usage>) and WorkBuddy Usage (<https://www.workbuddy.ai/profile/usage>) sites to know how much credits you've consumed. Alternatively, you can check out how much credits each task consumes when using it. Screenshot examples below:

VII. Product FAQs

I. Common Q&A

1. Agent or chatbot?

Both WorkBuddy and CodeBuddy are AI agents, not chatbots. They plan the steps, operate on your files/code, run multi-step tasks, and hand you a finished, verifiable result.

2. What model can I use in the free version?

Built-in models organised by capability tier:

- CodeBuddy: Fast · Balanced · Primary · Deep (each has a credit multiplier, e.g. Fast 0.34× → Deep 2.20×).
- WorkBuddy: Default · Fast · Balanced · Primary · Deep
- You can plug in your own model via "Configure custom models":
how-to guide ([CodeBuddy](https://www.codebuddy.ai/docs/cli/models) (<https://www.codebuddy.ai/docs/cli/models>) / [WorkBuddy](https://www.workbuddy.ai/docs/workbuddy/From-Beginner-to-Expert-Guide/Function-Description/Model) (<https://www.workbuddy.ai/docs/workbuddy/From-Beginner-to-Expert-Guide/Function-Description/Model>))

3. Credits vs. Token? Where can I see the credits consumption process?

Credits are driven by two things: how much the model processes (tokens) and which model you pick (its rate multiplier) — more tokens or a higher-tier model means more Credits.

Codebuddy / Workbuddy credits usage site: [Tencent Cloud Code Assistant](#)

[CodeBuddy – AI Code Editor](#) (<https://www.codebuddy.ai/profile/usage>).

4. What's the difference between default mode, ask mode and plan mode?

- Default (a.k.a. Craft) — "you say, I do."

The agent takes action immediately: reads/writes files, runs commands, and delivers the result end-to-end. Best when you just want it done.

- Ask — "talk only, hands off."

It answers questions, reads and analyses, but makes no changes — no file edits, no commands. Best for exploring, reviewing, or Q&A when you're not ready to let it act.

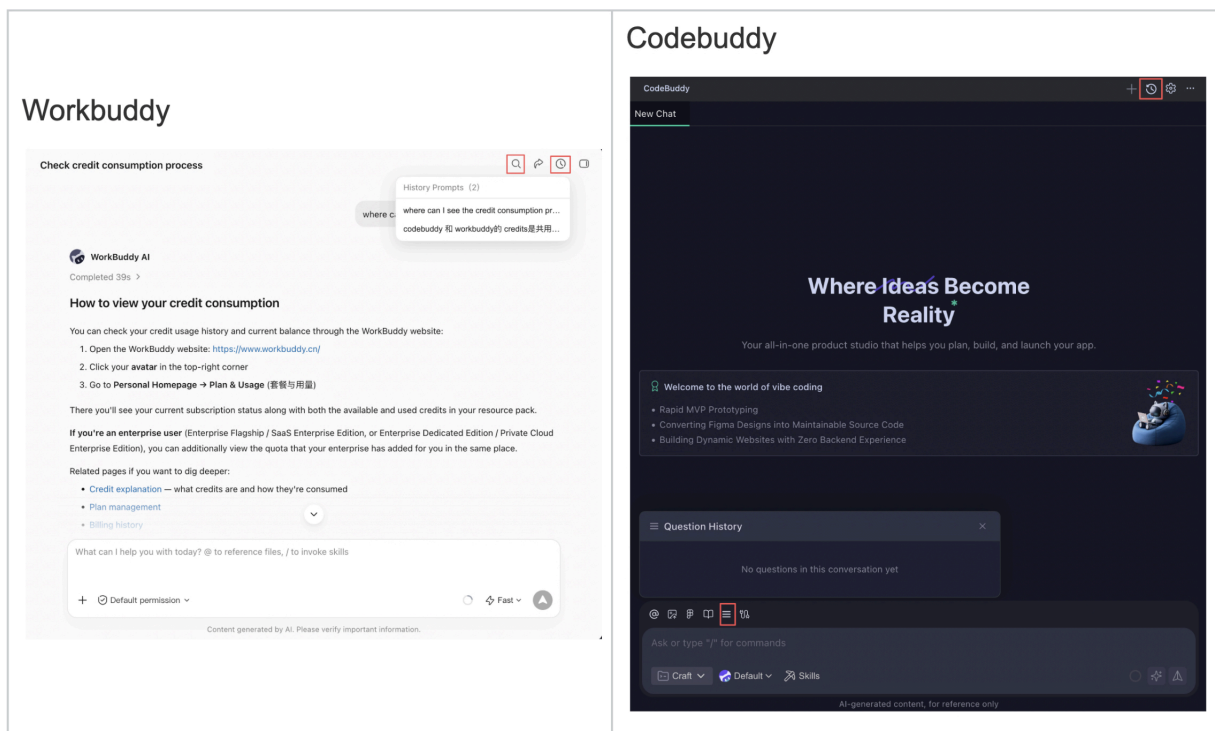

- Plan — "think first, do second."

It analyses your request and lays out a step-by-step plan for you to review; it only executes after you approve. Best for complex or high-stakes tasks where you want to see the approach before anything changes.

5. What does "select folder" / "select workspace" mean?

It's you granting the agent a working directory — the folder it's allowed to read and operate in. Everything happens inside that authorised folder only, sandboxed, so it can't touch the rest of your machine.

6. Where can I see all my history prompt in a task?

7. Is my data / code safe? Where is it stored? Will it be used to train the AI models?

Your data and code are private by default, encrypted, and never used to train our AI models unless you explicitly opt in.

Your personal data is stored on servers in Singapore. Your actual inputs and outputs are retained on our side for a maximum of 14 days, while much of your configuration is stored locally on your own device and never sent to our servers.

Please note that, in order to generate responses, your inputs may be processed by third-party LLM providers. We therefore recommend that you avoid sharing any sensitive personal information in your prompts.

For Workbuddy:

1. What's the difference between "new task" and "assistant" ?

- New Task = a fresh, self-contained work thread scoped to one goal, with its own clean context. Use it when you start something new and don't want it mixed with earlier conversations.
- Assistant = your persistent personal agent — the always-there companion

that carries your identity, preferences and memory across tasks and sessions.
a Task is a piece of work; the Assistant is the worker who remembers you between jobs.

2. What's the difference between "Skills, Experts, Connectors" ?

- Skills = capabilities. Packaged scripts and workflows that let the AI perform a specific action — generate a PPT, process Excel, control a browser
- Experts = capability + domain expertise. An AI role that thinks with the methods and judgment of a specific field (e.g., a legal or marketing expert). Use when you have a focused, single-domain problem.
- Connectors = bridges to external services. They link our product to your outside apps and data (email, Google Docs, Meeting, TAPD, etc.) via authorized login, so it can read/write on your behalf.

For Codebuddy:

1. IDE or CLI — which one do I install, and what's the difference?

- CodeBuddy IDE — a full AI-powered editor with a visual interface. Best if you want to see, click, and build (design-to-code, visual debugging, one-click deploy). Ideal for product managers, designers, full-stack developers, and beginners.
- CodeBuddy CLI (Code) — a command-line tool that plugs into your existing terminal workflow. Best if you live in the terminal and want natural-language-driven automation (Shell / file / task orchestration). Ideal for DevOps, SREs, and senior developers.
